**Subject:** ROSEMONT 404 Impacts follow up

Gautam...as follow up to your question concerning impacts to waters of the US, we have examined the proposed Rosemont Mine project with particular attention to the direct and indirect effects of the proposed Section 404 discharges. Attached is a summary of the direct and indirect effects of the proposed project to waters of the US, including wetlands. We have also attached three graphics (maps) of the proposed mine site, including the pit roads and various operational elements to the copper mine operation. Should you have any questions concerning this information please let me know and we can discuss. Thanks Clay

Clay Miller
